**** DISCLAIMER**

This list is not 100% accurate, but is hopefully pretty close to the actual new features introduced for each release of AutoCAD. This list was composed from various Autodesk's release comparison matrices, blog posts and websites that discussed each release as they came out. The Autodesk matrices were not consistent as to how the products were indicated as new and improved and each Matrix release had an inconsistent set of categories, so the mergers of features may be off.

Although I started out showing which features were improved with each version, that become very cumbersome so I removed it. AutoCAD gets improvements on a regular basis, so the most exciting thing is when a completely new feature gets implemented.

This is meant to be a living document that will be updated as new versions come out and corrections brought to light. If you are aware of any discrepancies or are aware of an Autodesk version or other source that has created a more comprehensive version of this list, I would love to hear about it.
